

MINAB Pac[®]

The FDK series

MINAB FDK

Fully-automatic packing machine for packing bottles, drums and jars in slotted boxes or trays

Rapidly resettable for different types of packaging and cartons.
Variable packing pattern.

Format-dependent parts are modular, making the machine highly versatile and easy to reset.

There are two basic versions of the machine:

MINAB FDK-1

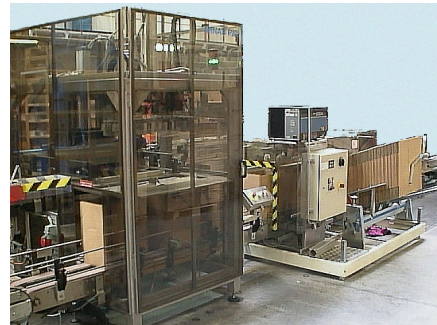

How it works:

The packages are moved from the conveyor into the machine by a pusher.

The number of repetition determines the packing pattern.

A gripper tool moves down and grips the packages.
Two doors then open and the packages are moved down into the carton.

The tool moves up and a new pattern can be arranged.

MINAB FDK-2

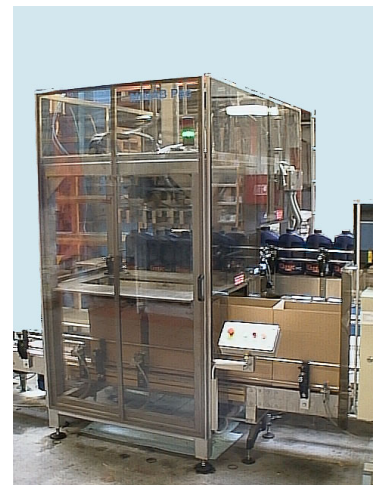

How it works:

The packages are sorted into their packing pattern on the infeed conveyor.

An infeed cylinder moves the packages to a pick-up position.

Two gripper tools move down, pick up the packages and move them to the packing position.

The packages are moved down into two cartons. The gripper tools can then go and pick up new packages at the pick-up position

For other configuration or more technical information.
